What is Hydro Extractor?

Hydro extractors are effective machines used in the textile industry and laundry facilities. Also known as centrifuge. It removes the water inside the wet textile products by placing them in the hydro extractor with the help of stainless steel and perforated metal walls and rotating at high speed.

Features of our Hydro Extractor

Superior Efficiency

By taking up to 95% of the water in the laundry, they dry them faster and using less energy than other drying methods. In this sense, it is an environmentally friendly machine.

Significant Speed

Hydro extractors spin laundry at very high speeds, usually between 500 and 1,500 RPM. This allows water to be removed quickly, efficiently and effectively.

Large Capacity

Hydro extractors come in various sizes with different capacities to suit different amounts of laundry. It can process more laundry at the same time. In this sense, it is very useful for commercial or industrial uses.

Superior Security Equipment

Our hydro extractors are built with stability control features in mind to prevent the machine from vibrating too much for safety. In addition, there are safety switches that protect against overload and overheating.

Time and Cost Savings

You can save time and costs with effective and efficient TOLKAR Hydro Extractors. You can provide customer satisfaction with the efficiency of our high-tech machines.

Specification Of Our Hydro Extractor

Type	Max. capacity (Kg)	Drum Dimension (mm)	Speed(r/min)	Power(Kw)	Overall Dimension(mm)	Net Weight (Kg)
SS752-500	25	500×260	1000	1.1	1000×1000×600	220
SS752-600	45	600×300	1000	2.2	1200×1200×700	370
SS753-800	80	800×340	910	4	1500×1500×800	680
SS751-1000	130	1000×380	900	5.5	1800×1800×1000	1050
SS754-1200	220	1200×480	750	7.5	2000×2000×1100	1500
SWE301-1500	500	1500×600	650	10	2450×1950×1500	2800

Application of Hydro Extractor

Remove moisture

Hydro extractors are machines that remove moisture from things such as clothing or food goods by harnessing the power of water. Hydro extractors can also be used in the textile industry. They find widespread application in the textile business for the drying of fabrics, as well as in the food industry for the drying of various spices and herbs.

Recycling of water

Hydro extractors have a number of useful applications, one of which is the recycling of water, which is an interesting feature about these devices. The extracted moisture can be collected, cleaned up, and then reused in the hydro extractor if the system is set up to operate in a closed-loop fashion. The operation of the machine in this manner can prove to be more economical and less harmful to the natural environment.

Separate the oil from the plant

One further little-known aspect about hydro extractors is the fact that they can be put to use in the process of removing essential oils from plants. The hydro extractor may separate the oil from the plant matter and collect it for use in fragrances, cosmetics, and other items. This is accomplished by utilizing steam or hot water to break down the plant material, which then allows the oil to be extracted from the plant matter.

Components of Hydro Extractor

Bass drum: the bottom drum helps to carry the upper portion of the hydro-extractor machine.

Outer Drum: Outer drum helps to resist the water and it's made from chrome steel.

Inner Drum: It helps to get rid of excess water from the clothes by gravity.

Motor: Motor is employed to supply the motion and drive the machine.

Motor pulley: Motor pulley is employed to transfer motion from motor to machine.

M/c Pulley: It gets the motion from the motor via a motor pulley and this helps to rotate the machine parts.

Galvanize steel top: It covers the inner drum of the hydro-extractor machine.

Centrifugal shaft: Centrifugal shaft is rotated and makes the gravity that's bound to remove the water from garments.

Water outlet: A water outlet is employed to water out from the hydro-extractor machine.
